

a Landmark atlas

○ T24 ■ T48

Primary-independent pooled change (95% CI); T24 and T48 are separate paired populations

DIAGNOSTIC SIGNATURES

SIG001 Sepsis MetaScore

OTHER INTENDED USES

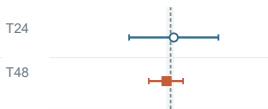

SIG022 Bacterial/Viral MetaScore

SIG002 SeptiCytE LAB

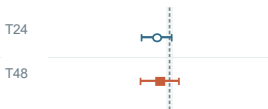

SIG023 Herberg two-transcript DRS

SIG003 FAIM3:PLAC8

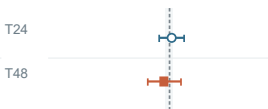

SIG033 Lin seven-gene mortality score

SIG004 sNIP

SIG034 Severe-or-Mild score

-1.5 -0.5 0.5 1.0

-1.5 -0.5 0.5 1.0

Pooled within-patient change (ΔZ)

b Measurement context

Published formula
Genes, coefficients
and direction

Source baseline
Study-specific
initial sample

Longitudinal interpretation
Landmark change +
gene-contribution pattern

Sampling window
T24 and T48
remain distinct

Cohort evidence
Effect, CI and
prediction interval

Interpretive scope

Repeated-measurement behavior only. Clinical monitoring, prognosis, treatment response, and causal mechanisms remain unestablished.
